

# Mobile Link™

Mobile Link cellular remote monitoring lets you get and share information about your home standby generator no matter where you are, using your computer, smart phone, or mobile device. View your generator's status and maintenance needs. Set its exercise schedule. Review its running and maintenance history. And get notified of status changes. The Mobile Link device can be installed in minutes. Because it sends data via cellular network, it's easier to configure and more reliable than the Ethernet and telephone connections found in many competitive remote monitoring solutions. Cellular remote monitoring service is included for the first year with the purchase of a Mobile Link device. After the first year, choose from monthly or annual cellular remote monitoring plans.

## Your Generator's Information, at Hand and in One Place

**On your way to the airport**, you see your generator needs maintenance. You click to call your preferred servicing dealer to make an appointment while you're away.

**You're glad to be on the beach**, because you hear there's a big storm back home. One glance at Mobile Link tells you that your generator is running—protecting your home—because the power went out.

**During that long business meeting**, Mobile Link tells you that your generator is ready to protect your family at home if the power goes out.

**From your hotel**, you get notifications that your generator is exercising as it should.

**At dinner with friends** you see that there's a problem with your generator. You click to call your dealer to have it fixed before the next power outage.

**Your parents are impressed** with how easy it is to monitor your generator. They'd like one just like yours. You use Mobile Link to give them the model number, and put them in touch with your dealer.
